

Soybean Arkansas Climate-Change Simulation

Technical Simulation Run Report

Generated: 2026-06-08 01:05

```
Cells simulated : 11
Scenarios       : 2
Years           : 1 (2015...2015)
Total rows      : 22
Success rate    : 100%
Total run time  : 1.9 min
Completed       : 2026-06-08 00:46
```

Scenario Definitions

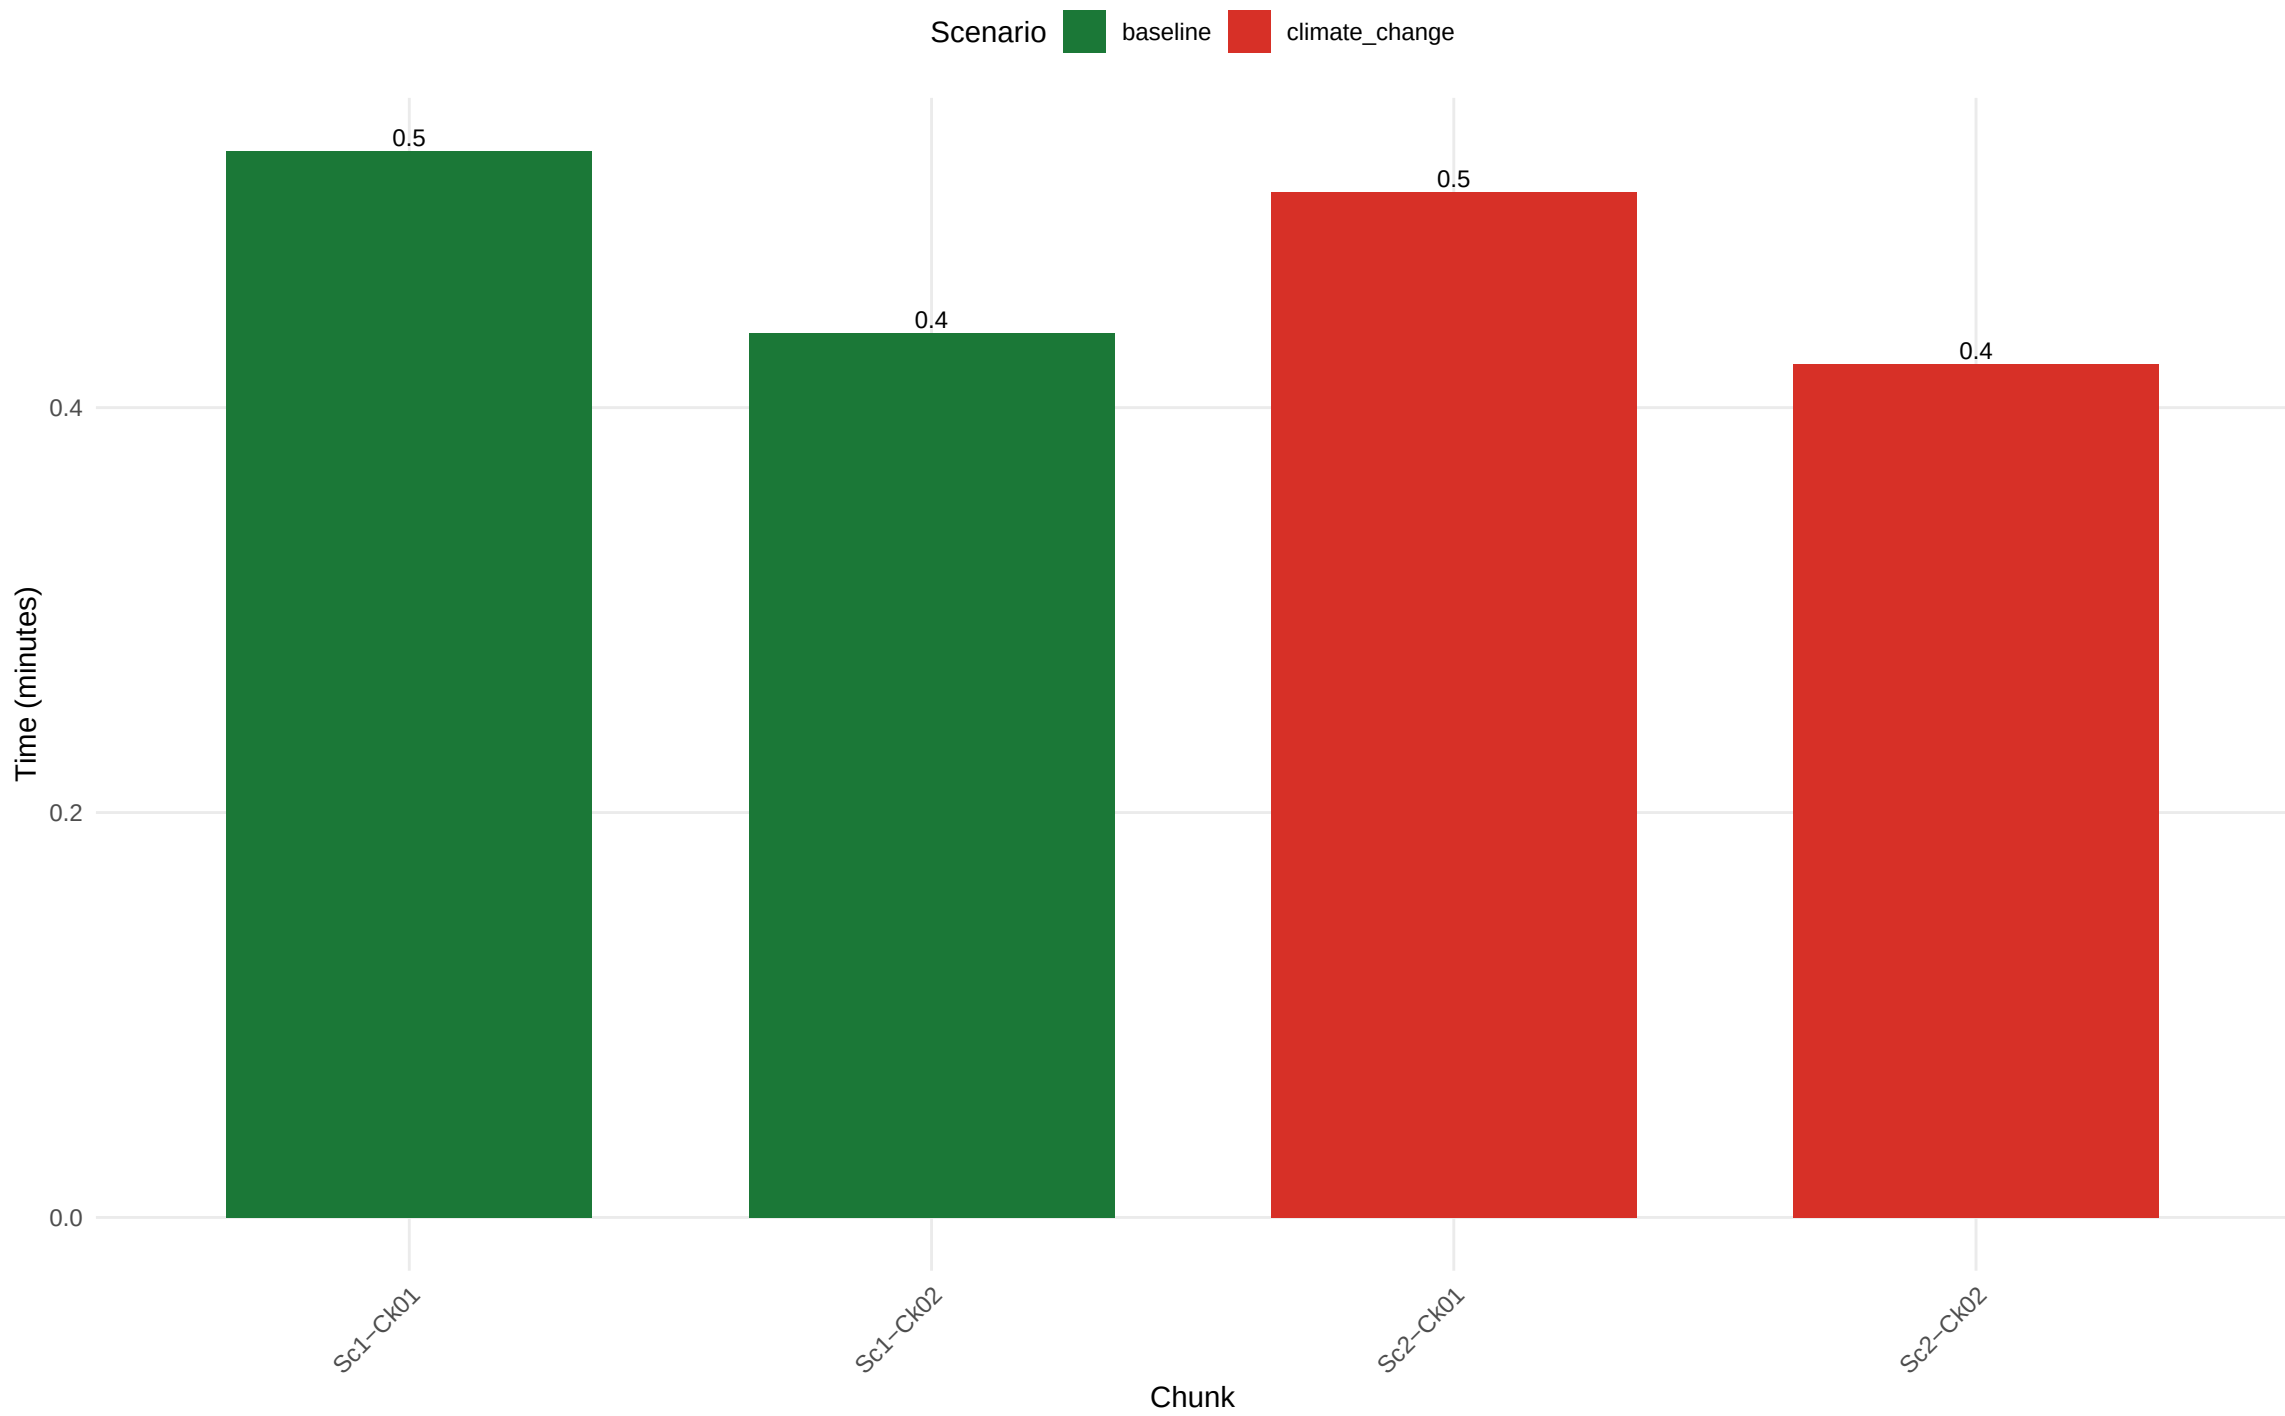

Scenario	CO2	Cultivar	Sowing	Climate
baseline	350	PurcellMG4	15-May	Current
climate_change	350	PurcellMG4	15-May	+2..C

Run details

Cells simulated:	11
Scenarios:	2
Years per cell:	1
Date range:	2015...2015
Total result rows:	22
Total run time:	1.9 min
Chunks processed:	4
Success rate:	100.0%
Completed:	2026-06-08 00:46

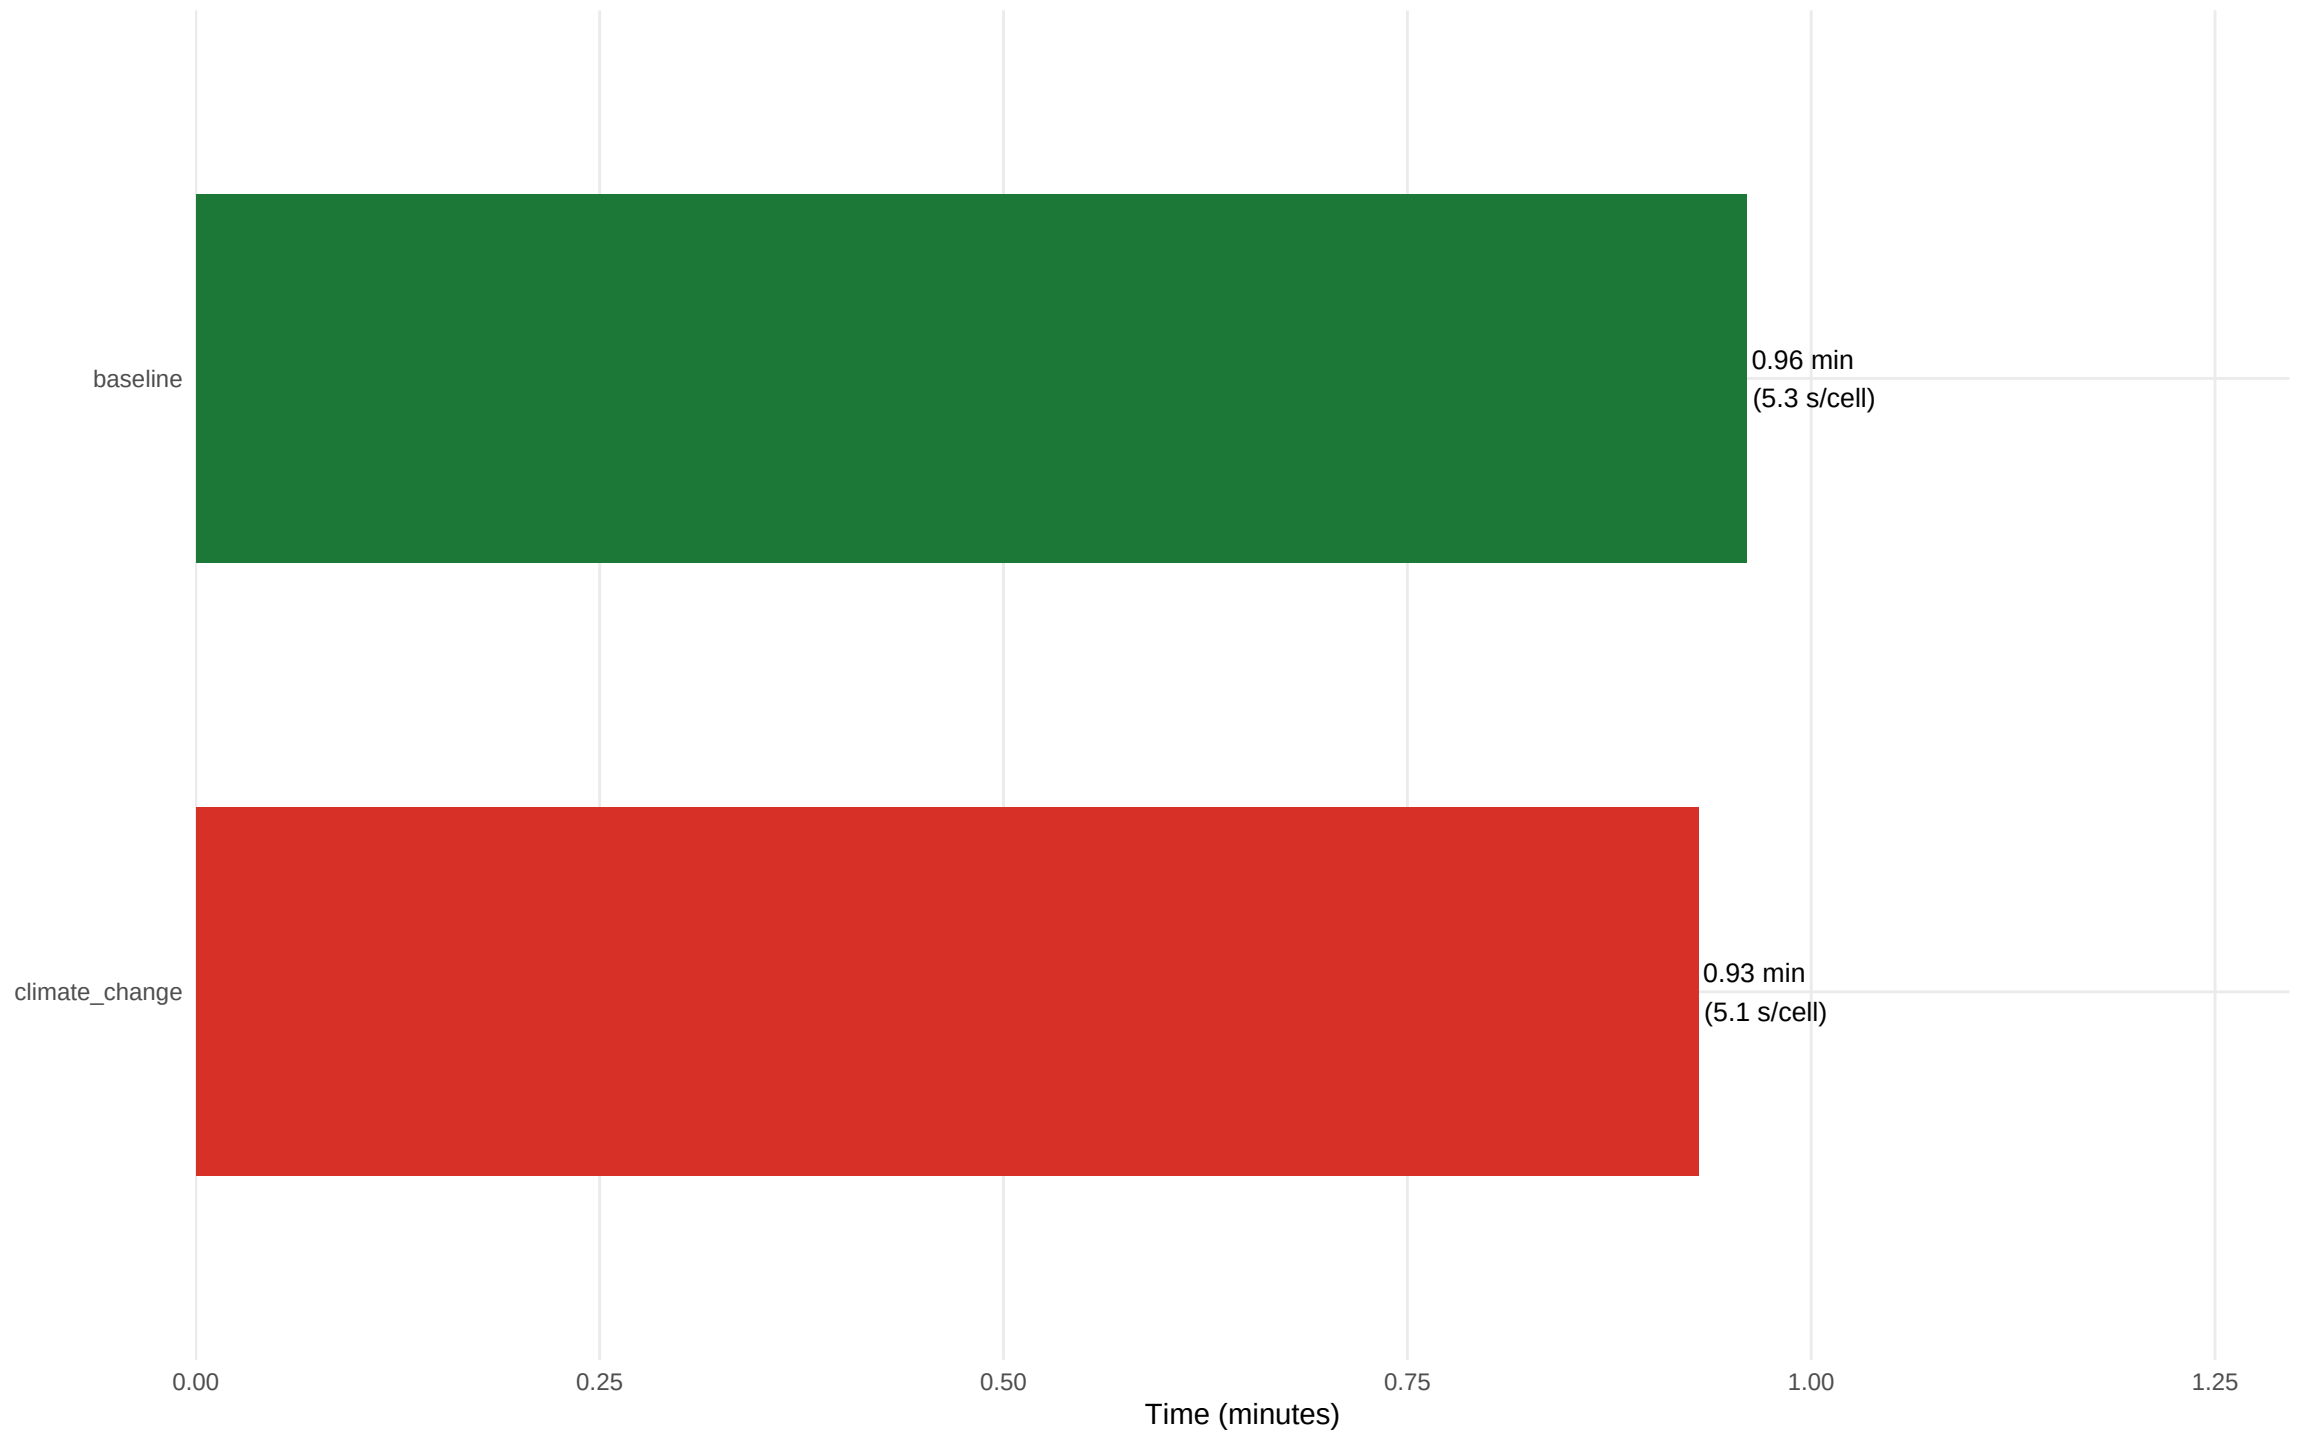

Elapsed time per chunk

Each bar = one parallel chunk

Total simulation time by scenario

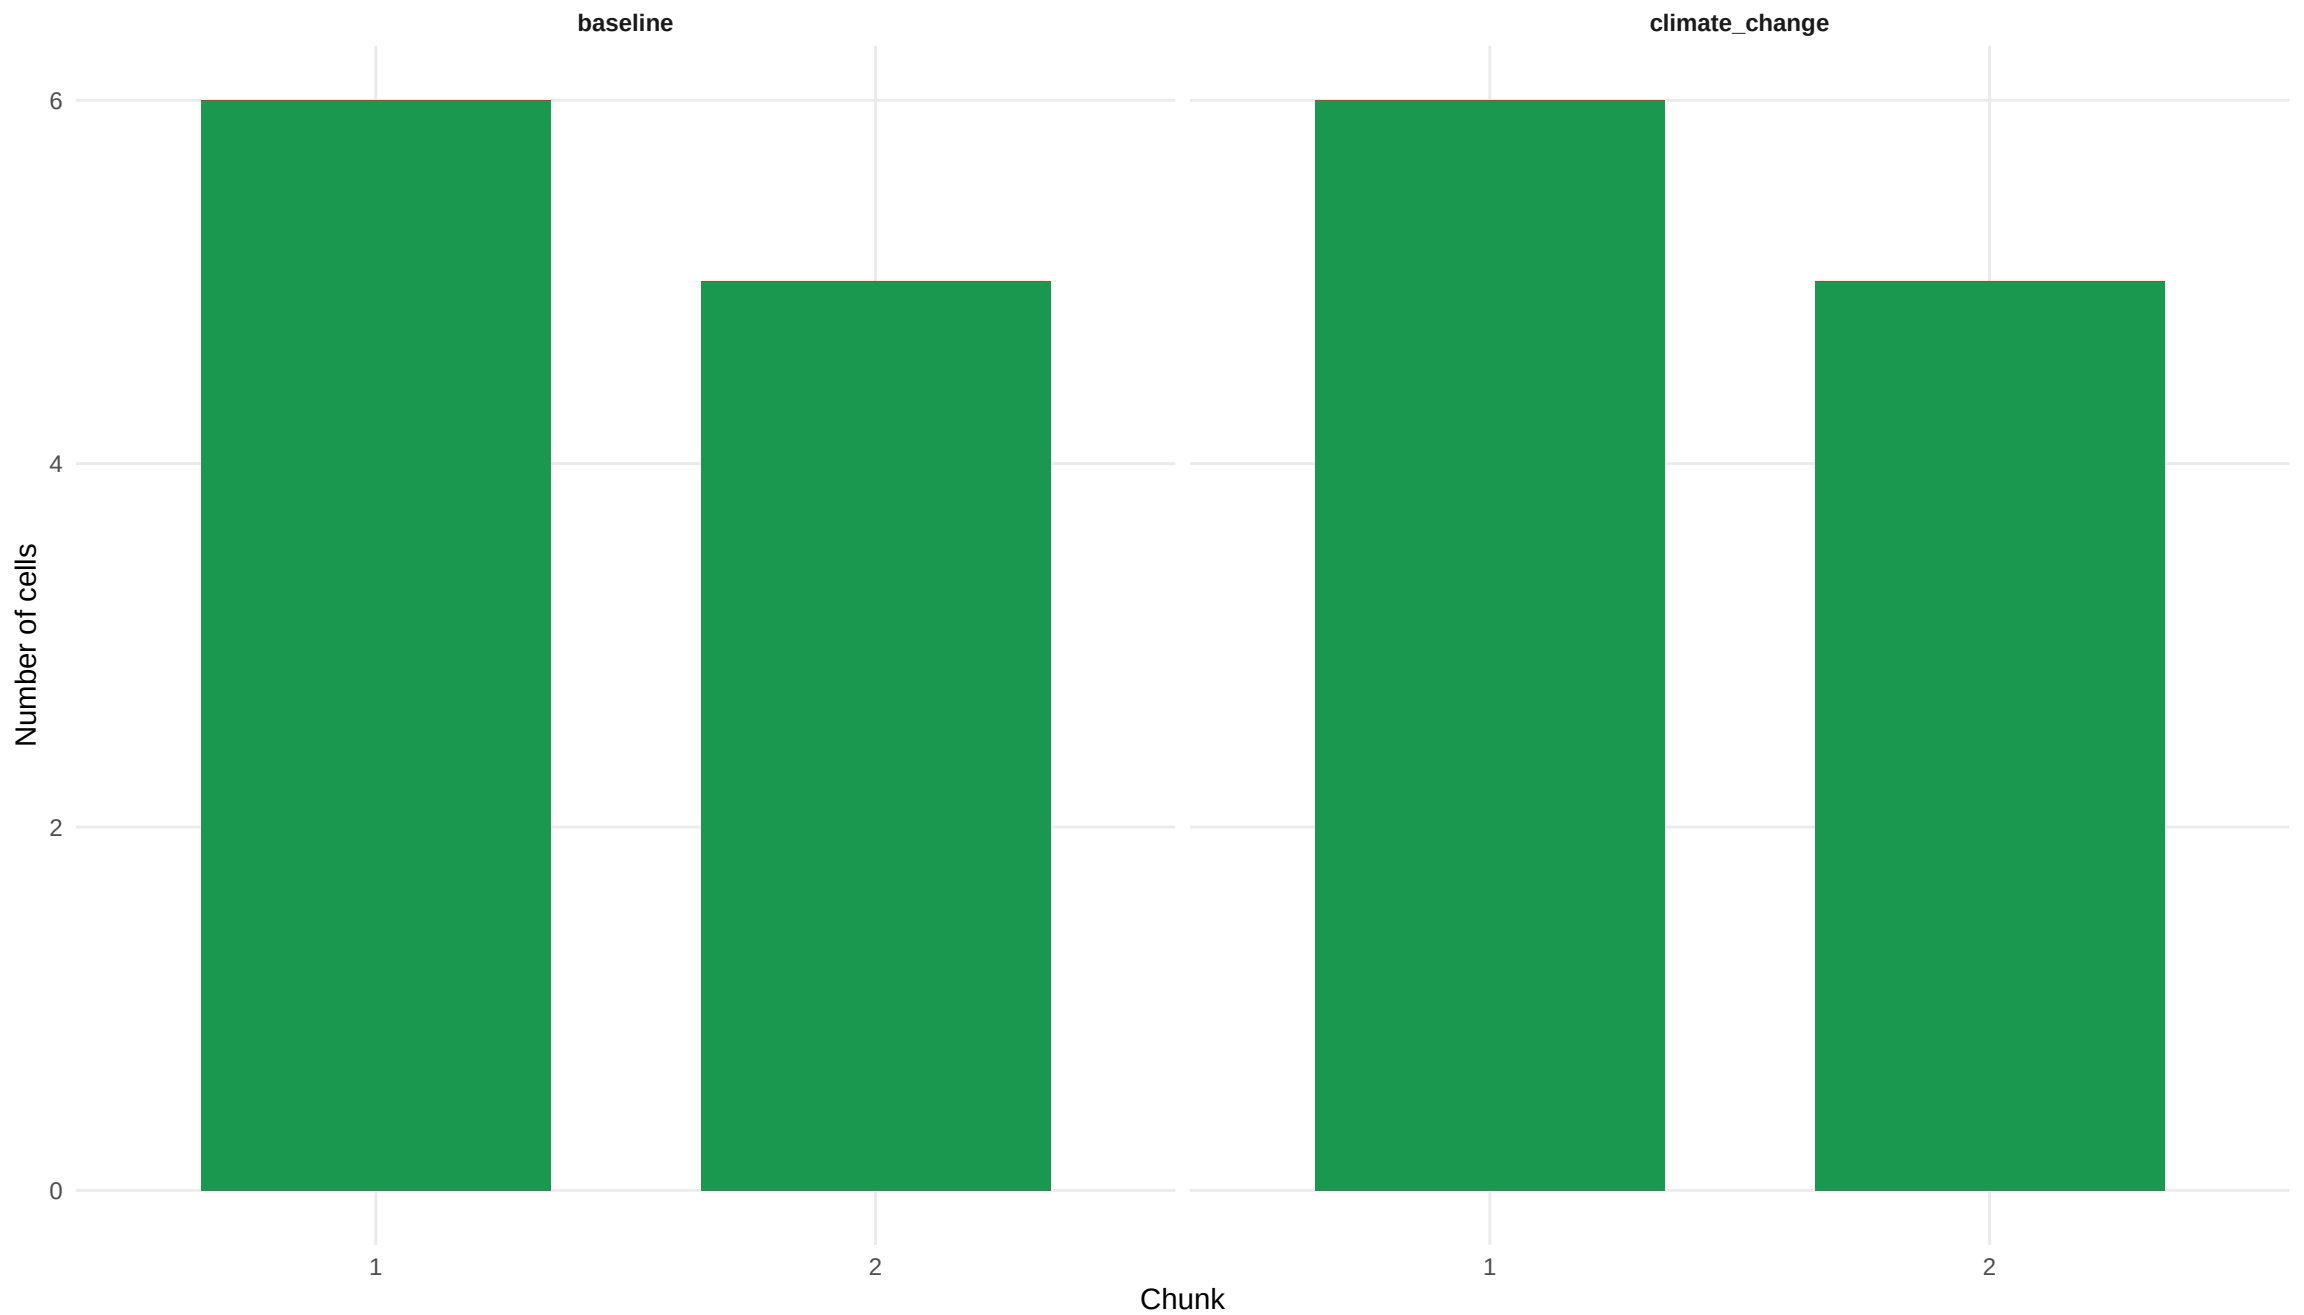

Labels show total minutes and seconds per cell

Cell success vs failure by chunk

Overall success rate: 100%

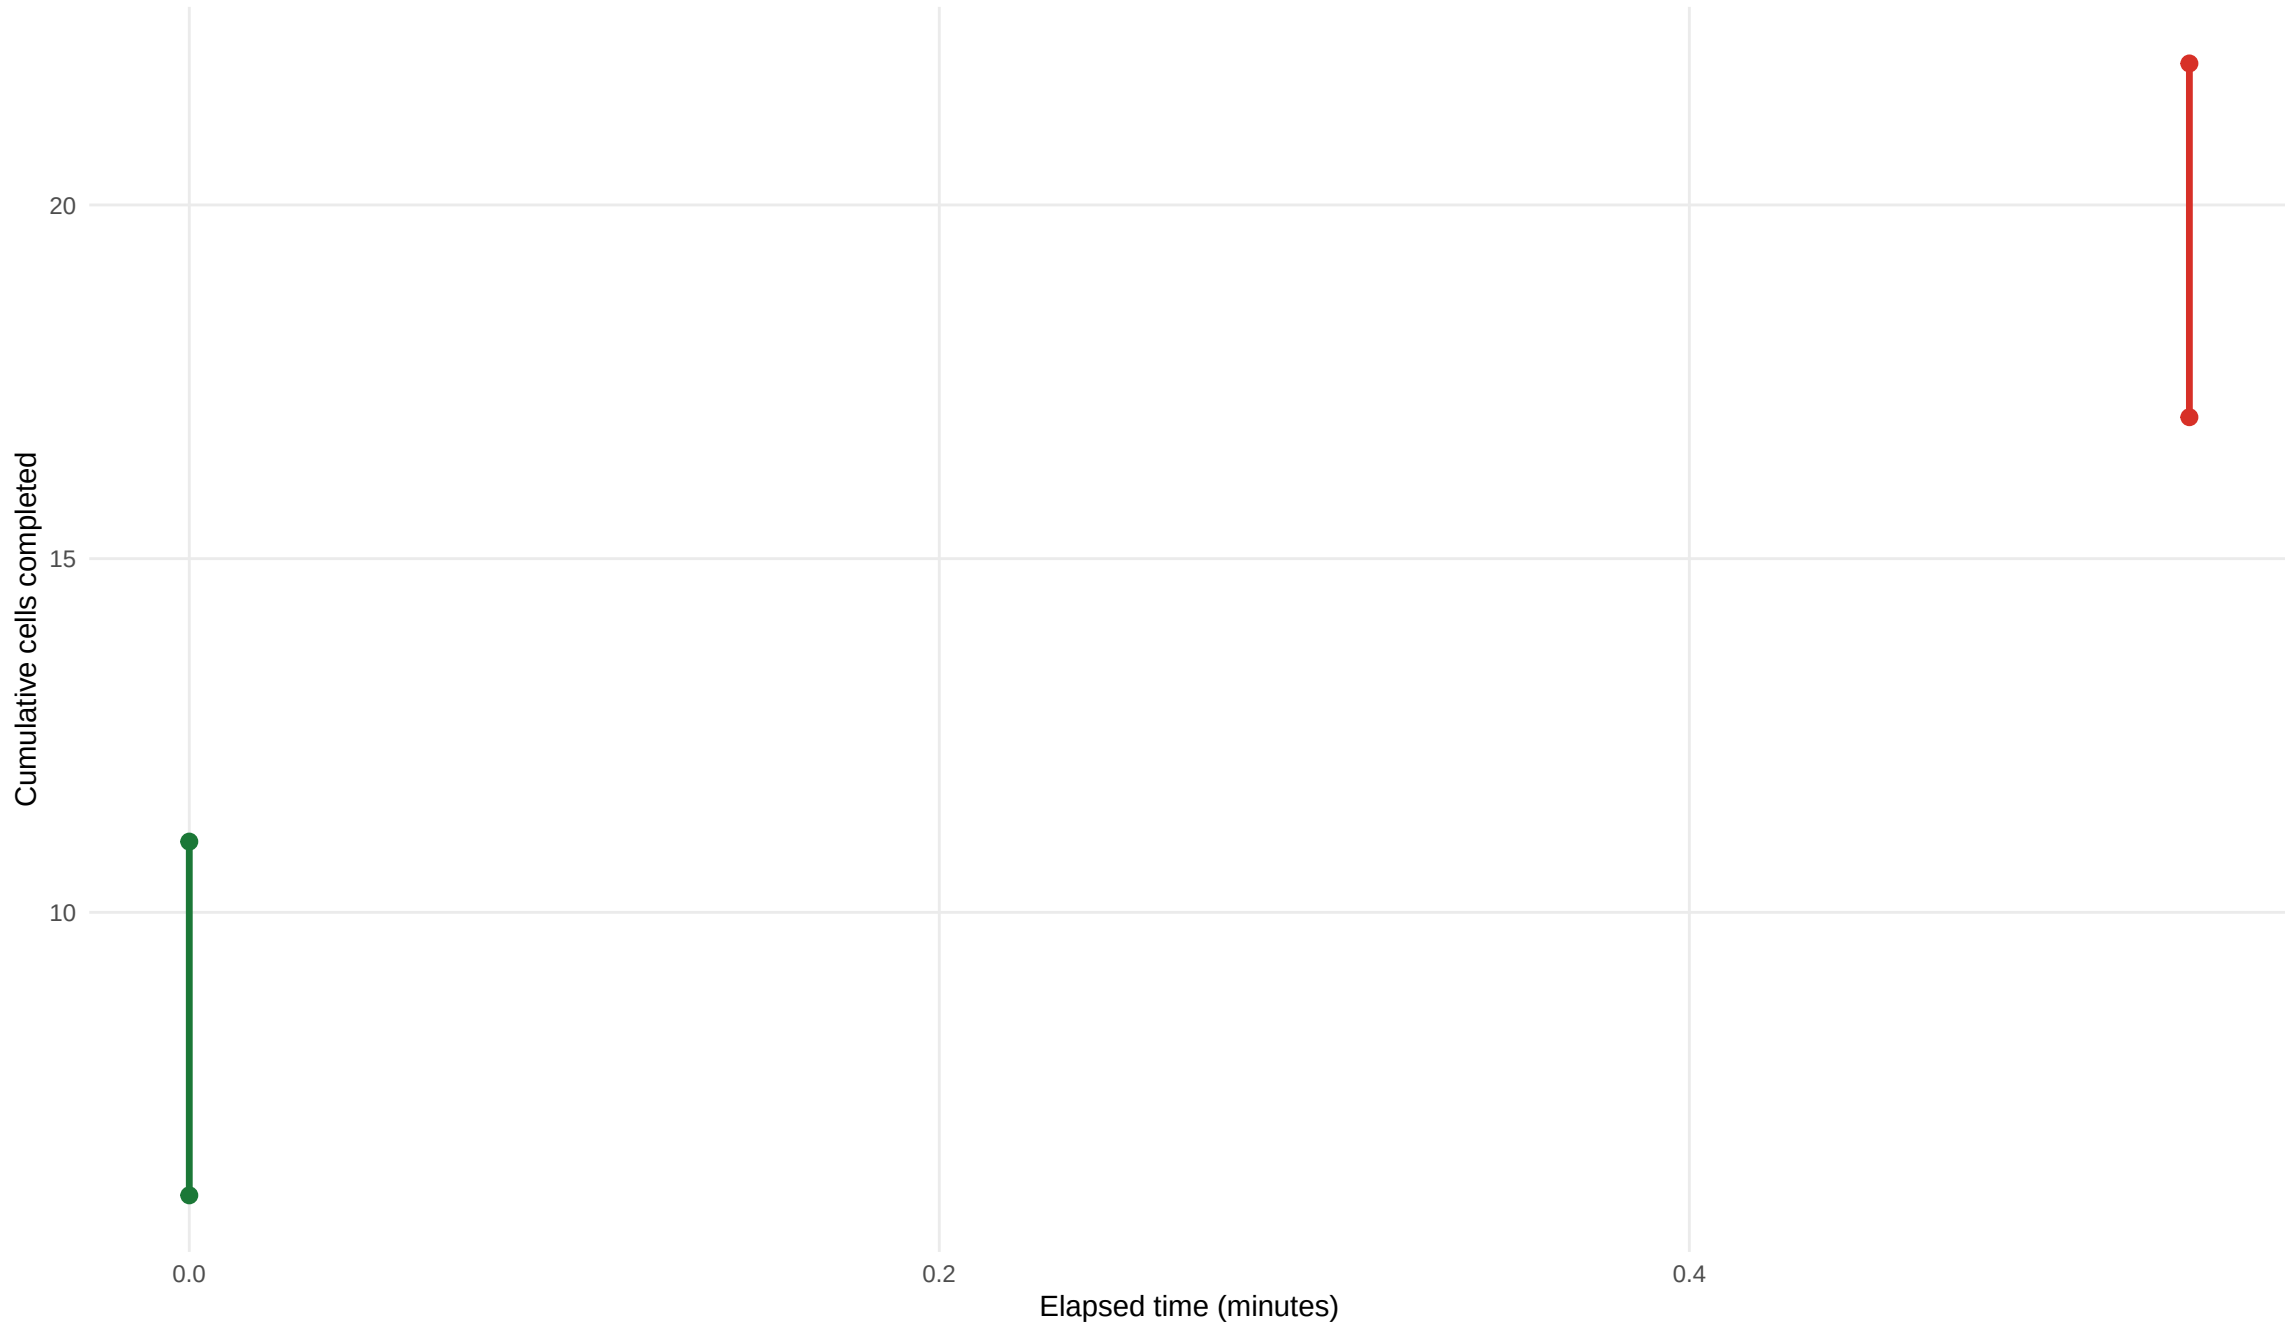

Cell status Failed Success

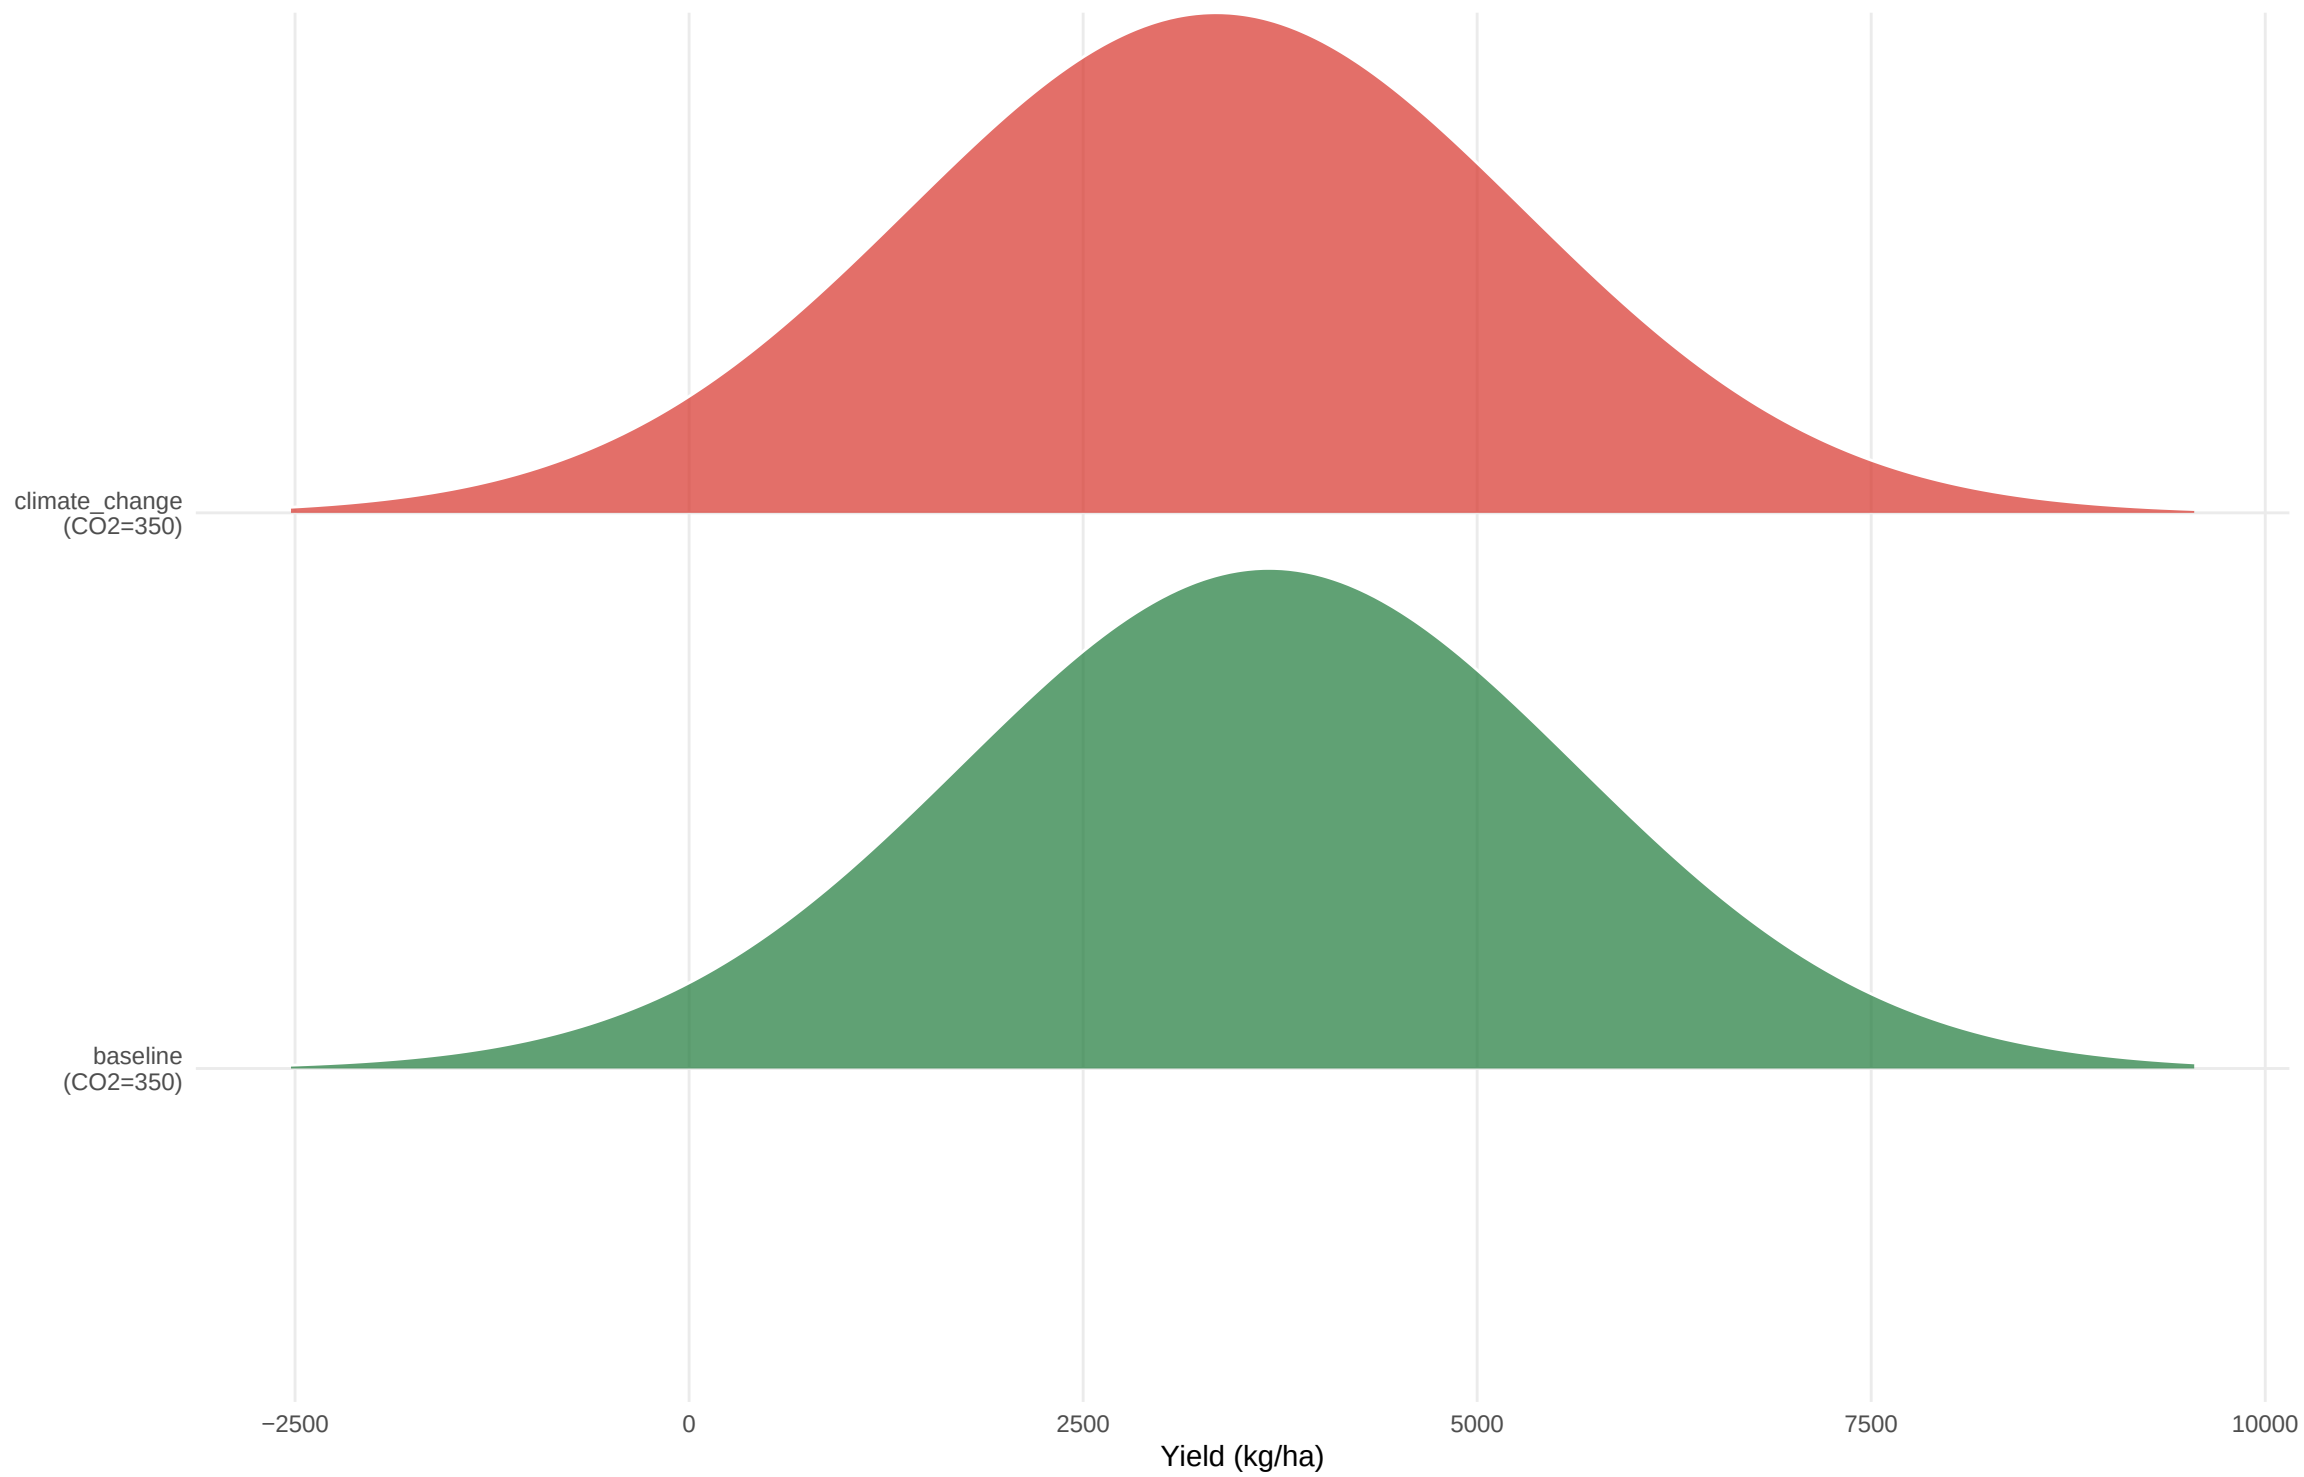

Cumulative cells completed over time

Each point marks end of a chunk

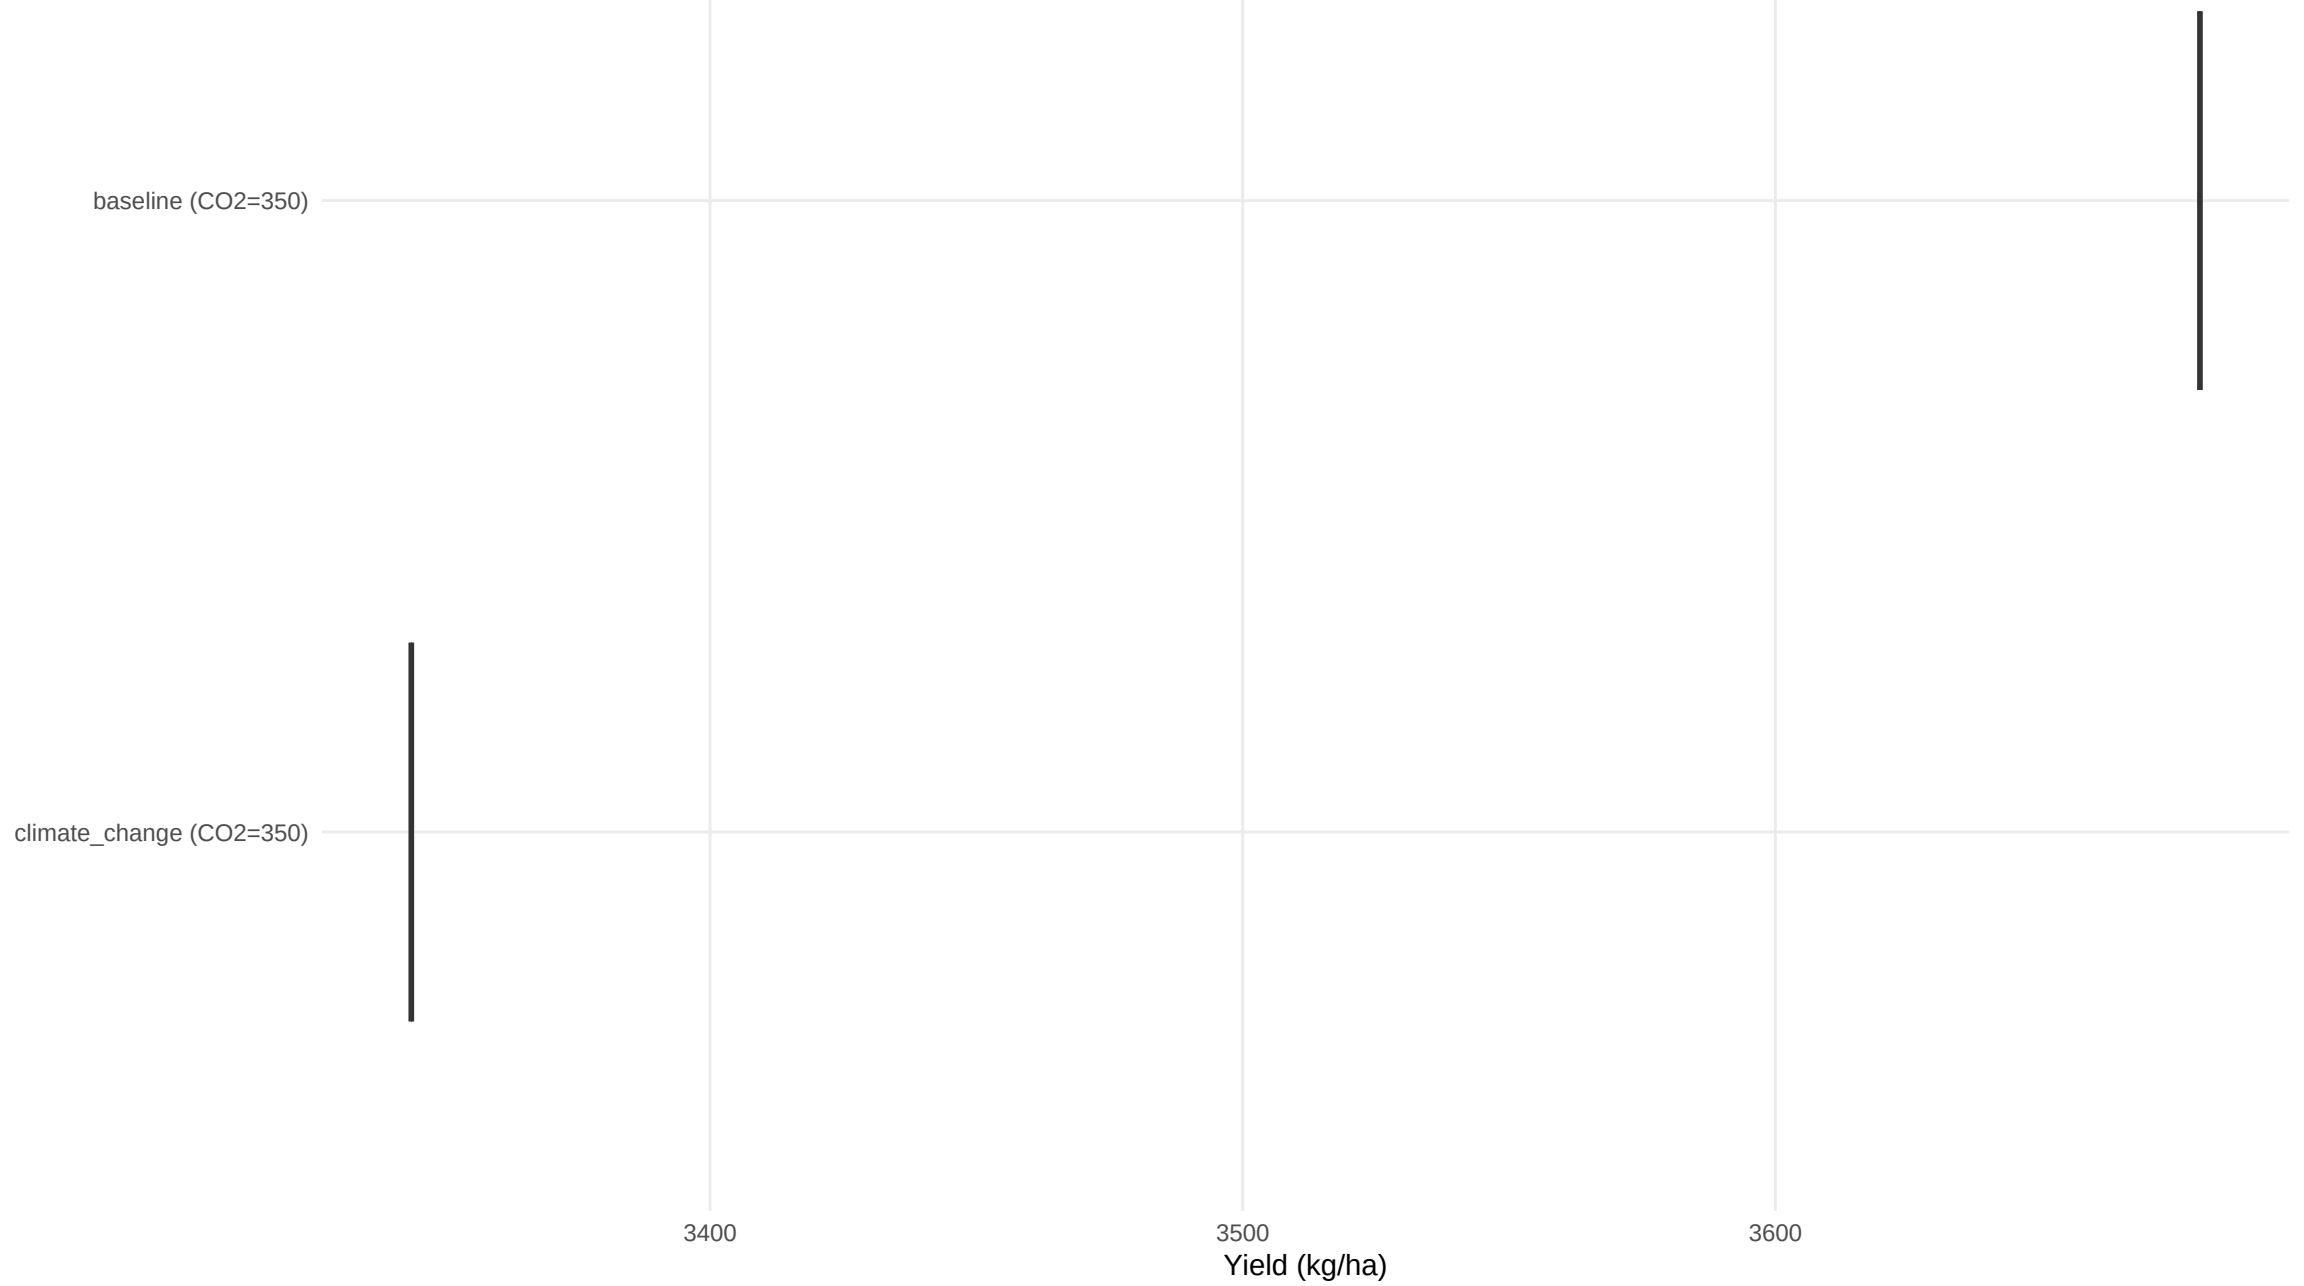

Scenario ● baseline ● climate_change

Simulated yield distribution by scenario

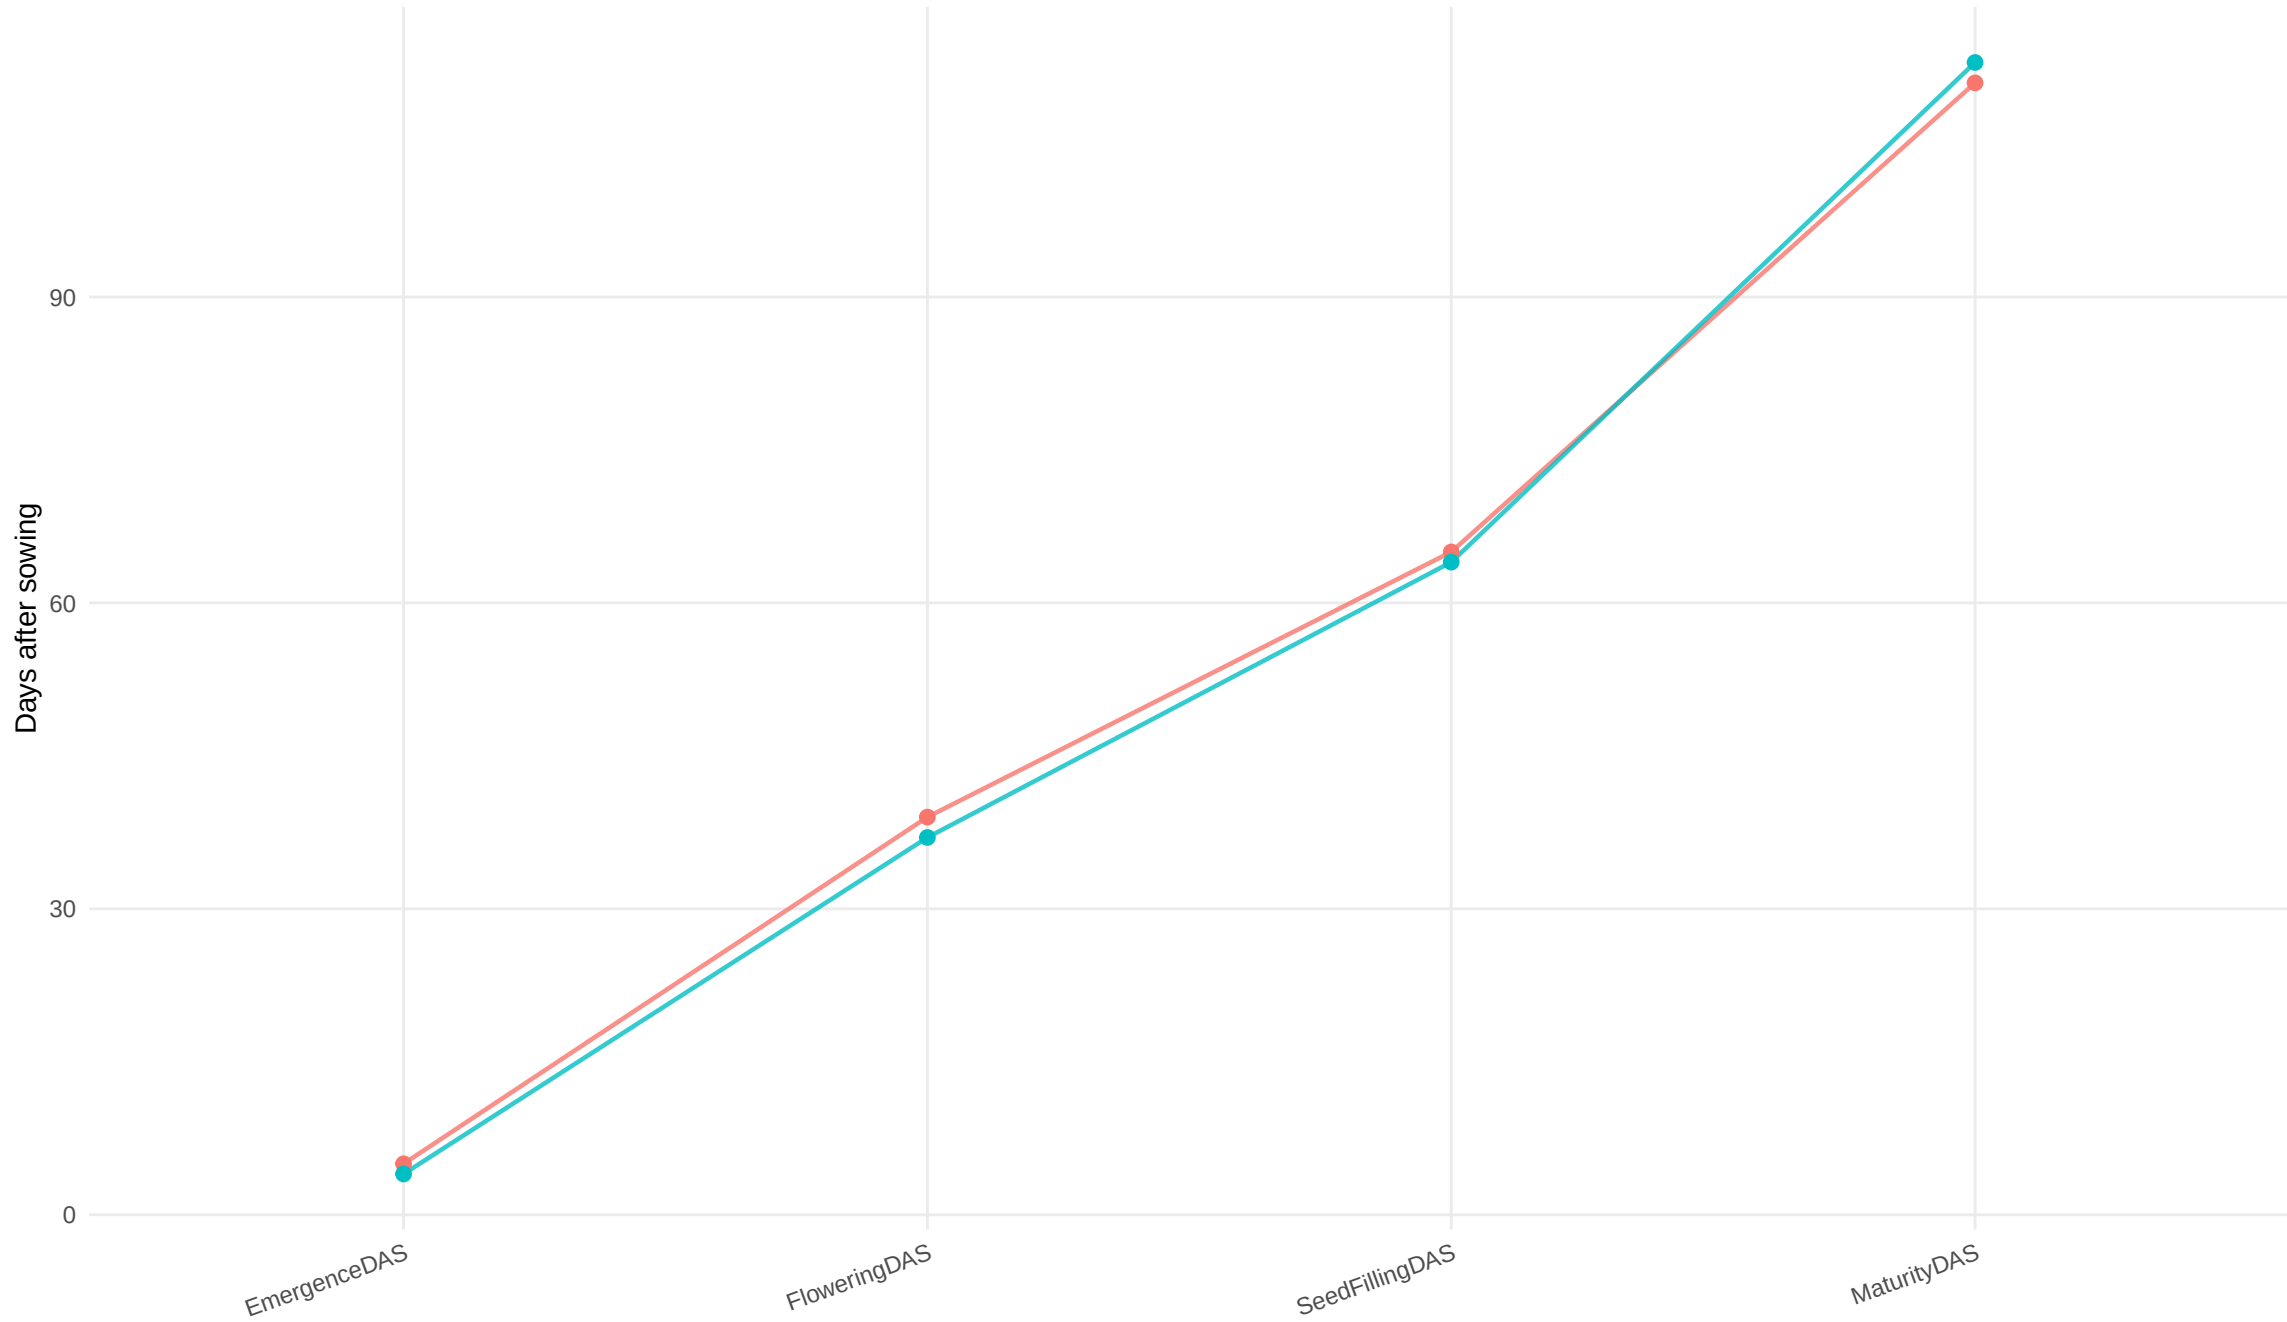

Yield summary by scenario

Phenology stages by scenario

Mean .. SD days after sowing

Scenario baseline (CO2=350) climate_change (CO2=350)

Weather inputs by scenario

CO2 = 350 ppm only
